PROFESSIONAL EXPERIENCE

Prudential Financial

September 2022 – Present

Software Engineer

Newark, NJ

- Led 7-engineer team delivering mission-critical life insurance platform utilizing TypeScript, React, TailwindCSS, Docker and AWS CloudFormation deployments, serving thousands of customers, directly contributing to **\$250M+ in sales** while maintaining 99.9% uptime through rapid resolution of 25 production issues
- Designed and deployed a GenAI chatbot platform enabling financial advisors to retrieve product information and generate quotes, reducing turnaround from hours/days to **under 3 minutes (30% of cases, 95% accuracy)** through both standalone UI and React microfrontend deployments across enterprise applications
- Collaborated in designing an enterprise Book of Business API, allowing applications on-demand access to advisor's business.
- Designed legacy policy synchronization pipeline loading cases from a 20+ year old admin database into new REST API through S3 batch processing and SQL Server CDC, keeping new life insurance tracker in sync without rewriting legacy event adapters

Daydream Dental

October 2025 – January 2026

Contract Software Engineer

Remote

- Improved outbound insurance claim reconciliation phone call system by analyzing call transcripts to granularize deterministic error reasons into focused buckets, enabling targeted prompt-based extraction improvements
- Prompt engineered outbound insurance claim reconciliation phone call system prompts to fail fast when required data was unavailable and improve data matching when inputs were present, reducing **40+ minute IVR loops** and system costs

Prism Technologies

June 2021 – August 2022

Software Engineer

New York, NY

- Created a highly performant and abstracted desktop application handling thousands of state changes per second utilizing Go, Electron, React and WebSockets
- Designed and deployed Refract desktop application from prototype to production, gathering a user base of **1,000+ active users** within 6 months who achieved **50K+ successful checkouts** generating **\$1M+ in combined profit** through systematic performance optimizations
- Designed and wrote Amazon Freebies and Lightning deals monitor using event-based hybrid cloud and peer-to-cloud monitoring microservice architecture in Go, automatically triggering checkout tasks on desktop application to capture time-sensitive offers within milliseconds of availability
- Rebuilt CI/CD pipelines from ground up, migrating from CircleCI to Github Actions, achieving 30% reduction in release cycle time through strategic artifact caching and eliminating deployment failures through automated testing and rollback mechanisms serving

Scout (Acquired)

November 2020 – March 2021

Software Engineer

New York, NY

- Migrated monolithic Rails application to React/NextJS microservices architecture using SSR/SSG, improving page load times by 3x and enabling rapid feature deployment for time-sensitive sneaker reselling operations
- Designed and developed custom microinteractions utilizing React and Framer Motion in order to improve user experience and satisfaction

PROJECTS

Vision (Acquired) | TypeScript, Kubernetes, SQL

April 2022

- Designed and deployed distributed NFT indexer processing **50K+ transactions daily** using TypeScript, SQL, Kubernetes, and Docker with optimized storage patterns for handling large-scale NFT collection rarity indexing at scale
- Built a website using NextJS, utilizing static site generation (SSG) by pre-generating pages after indexing data to deliver sub-500ms load times
- Developed Chrome extension using React and TailwindCSS, enabling users to trigger data indexing jobs directly from platforms like OpenSea and view enriched data in-platform
- Implemented secure license key system, user authentication dashboard, and subscription handling for both extension and web application

Discorders | Python, Node.JS, React, Docker, Kubernetes

November 2019

- Built and scaled B2B SaaS platform using Python, Digital Ocean and Docker, serving **30+ enterprise clients**, delivering real-time inventory monitoring, distributed notification systems, and automated purchasing workflows processing **5K+ events daily**
- Engineered high-availability infrastructure handling time-critical data streams with 99.99% reliability, directly enabling **\$250K+ in client revenue** through automated restock notifications during pandemic supply shortages

TECHNICAL SKILLS

Languages: JavaScript/TypeScript, Go, Python, SQL(Postgres, MySQL), HTML/CSS

Frameworks: React, NextJS, Node.JS, Flask, Django, gRPC, TailwindCSS

Developer Tools: Git, Docker, Kubernetes, CircleCI, Github Actions, AWS, Digital Ocean Cloud, GCP, VS Code
